Part 1. Crafting Your Document

01 Create or Import Documents

With Notein, you can easily create standard A4 notes or infinite canvas notes using our custom templates. You can also import documents in various formats such as PDF, PPT, Doc, JPEG, and PNG directly from your device.

02 Effortless Quick Notes

Create quick notes to skip the template selection step and start editing right away. Customize your default quick note style through the "Choose Template" page.

03 Infinite Canvas

Embrace boundless creativity with our infinite canvas feature. Notein's canvas automatically expands as you write, offering unlimited space in all directions.

Tips:

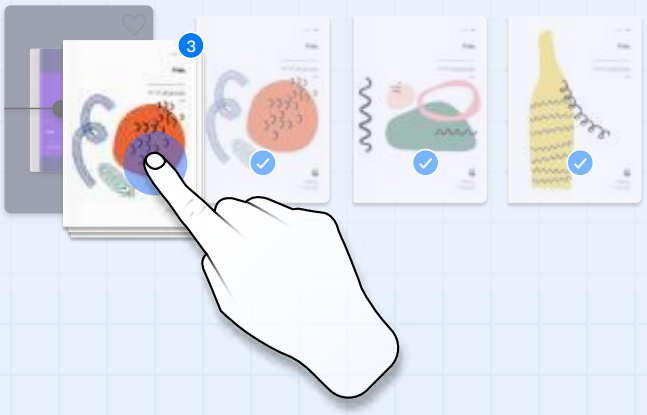

Easily navigate the larger canvas by using the right-side toolbar's 'blue frame' in the page overview for quick content access.

04 Organizing Your Documents

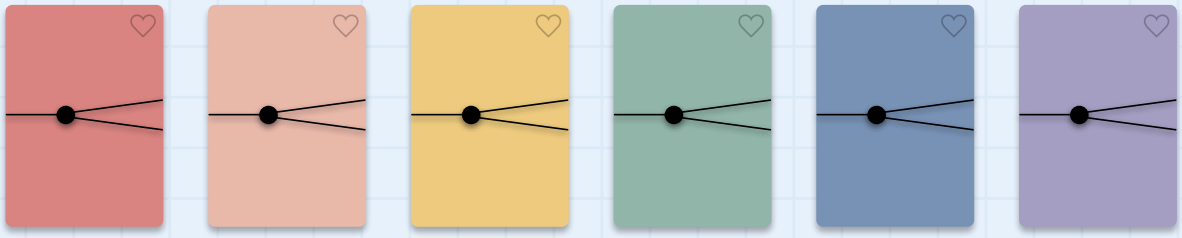

Merge Documents: Easily merge two documents by dragging and dropping one onto another, creating a new folder

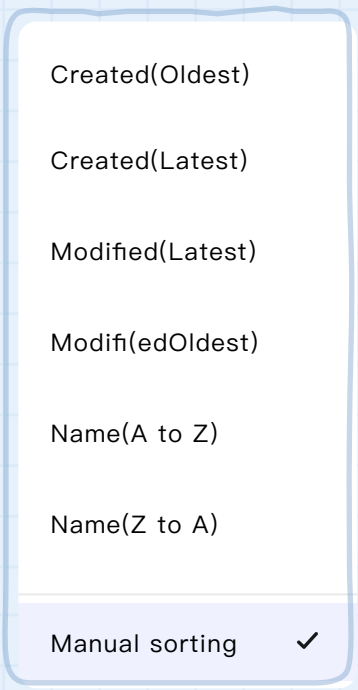

Swiftly Move Multiple Files: Use the to select multiple files, then long-press and drag them into a folder for quick organization

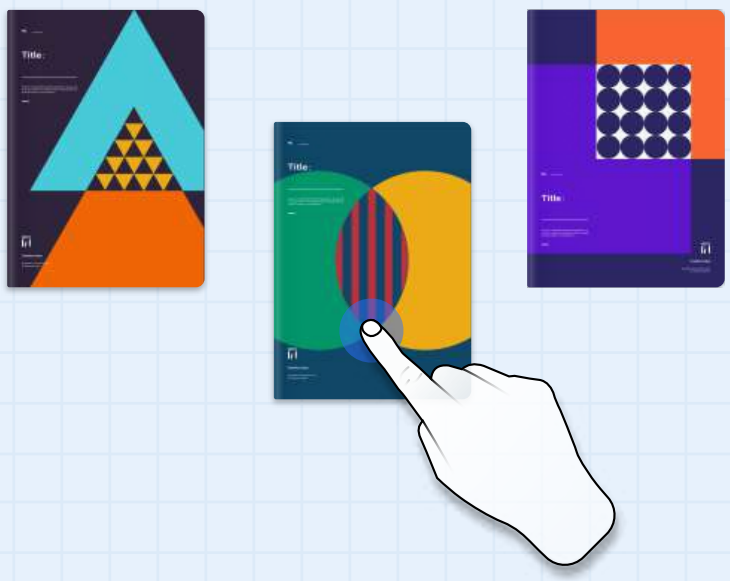

Create Nested Folders: Click the + to create new folders within folders, facilitating hierarchical document management. Enjoy infinite nested folders for seamless organization

The enables rule-based document sorting. For personalized arrangement, simply long-press and drag a document to rearrange its order.

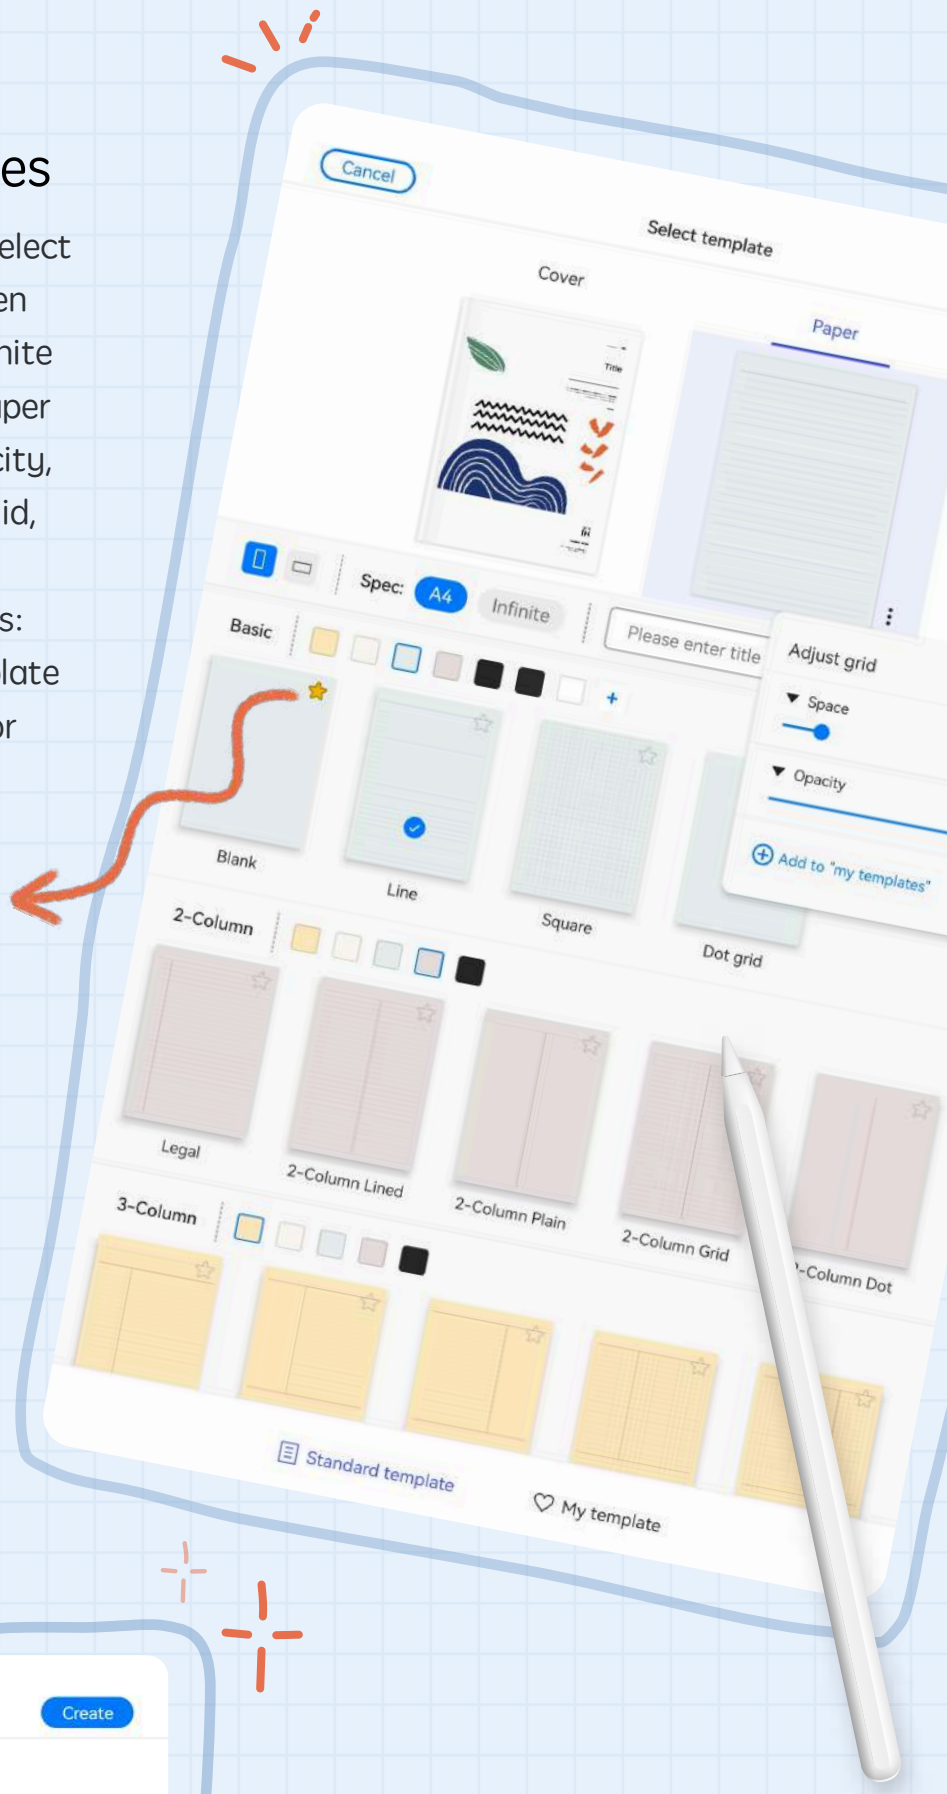

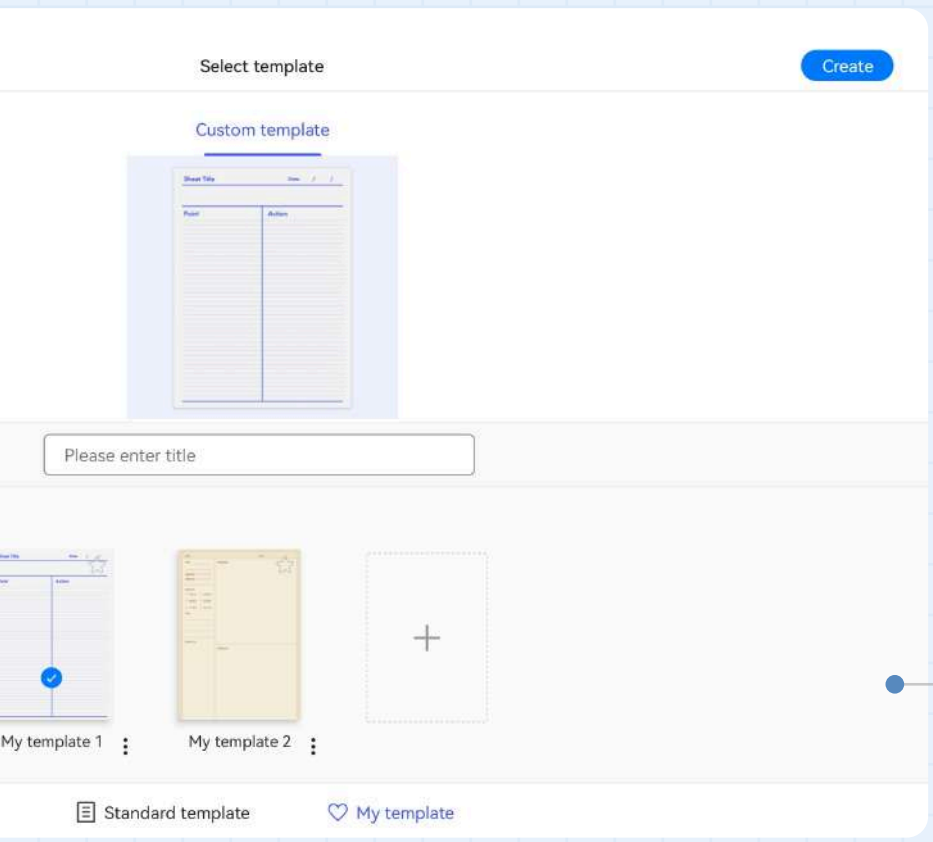

05 Choosing Templates

Wide Range of Templates: Select from various templates when creating standard A4 or infinite canvas notes. Customize paper color, grid spacing, line opacity, and more for blank, lined, grid, and dot templates.
Save Personalized Templates: Save your customized template styles to "My Templates" for easy access and future use

06 Quick Notes Setup

Personalized Quick Note: You can designate any template as your preferred quick note style by simply clicking the "star" icon ⭐

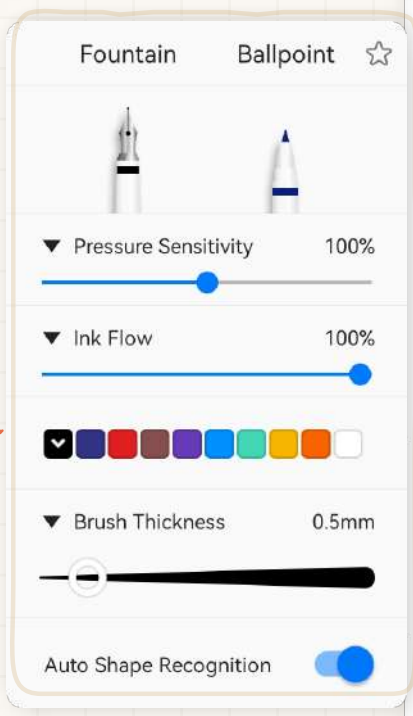

07 Customize Your Templates

Within "My Templates", you can directly import external files to become your regular templates . You can also save your modified basic templates to "My Templates" for convenient reusability.

08 Pen Case

Notein's versatile pen case can be easily dragged, expanded, or collapsed. It automatically collapses when dragged to the screen's corners and adheres to the edges when placed there. Each pen is pre-set with a specific color and brush thickness, and double-clicking the pen opens additional options.

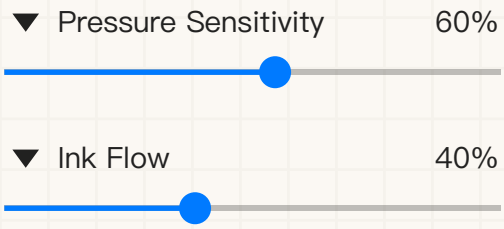

Fountain Pen

The fountain pen in Notein allows you to adjust pressure sensitivity and ink flow. Since everyone's writing style and force are unique, you can freely customize these settings to find your perfect fit.

Tips:

The pressure setting determines the stroke thickness with different writing pressures, while the ink flow controls the pen tip effect in your handwriting.

Ballpoint Pen

The ballpoint pen in Notein ensures consistent stroke thickness, regardless of the applied pressure.

Tips:

You can adjust the color opacity of the ballpoint pen to use it as a highlighter replacement.

Highlighter

The highlighter in Notein follows a rule of not covering black ink and features a color overlay effect.

Tips:

Highlighters may not stand out on dark-colored paper due to their unique highlighting rule. In such situations, you can use a ballpoint pen with adjusted opacity to solve the problem.

Masking tape

Notein's Tape feature lets you easily hide content. After applying the tape to the desired area, a single click on the taped area toggles between concealing and revealing the content underneath.

Tips:

In the tape pop-up menu, selecting "Hide All Tape" turns all applied tape transparent. This function is ideal for temporarily hiding sensitive information or for creating interactive notes with revealable content.

Eraser

Notein provides various erasing methods, including point erasing , whole stroke erasing , and selection erasing.

Pressure-Sensitive Eraser

By enabling the pressure-sensitive eraser, you gain the ability to quickly switch between the pen tool and the eraser while writing. To activate the pressure-sensitive eraser, pause the pen tip on the screen and apply light pressure for 0.5 seconds. This action will automatically switch your tool to the eraser. After erasing, simply lift the pen to revert back to the pen tool. Additionally, you can customize the sensitivity of the pressure activation to suit your preferences.

Tips:

You can set the "Erase Maker only" or "Erase tape only" switch in the eraser menu.

Geometric Pen

With the geometric pen, you can effortlessly draw various lines and shapes like dotted lines, wavy lines, arrows, function graphs, cubes, cones, cylinders, spheres, and more. You have the flexibility to adjust the brush color and thickness to suit your preferences.

Tips:

In the graphic pen menu you can turn on the "Graphic Fill" switch, the fill color defaults to the color of your graphic pen, and the opacity of the fill color can be adjusted.

Lasso Tool

With the "Freeform Lasso" or "Rectangular Lasso," you can select and capture various objects like handwritten strokes, shapes, text boxes, and images. This enables easy editing and moving of selected elements, and handwritten text can be converted to typed text using the "Convert" feature.

Tips:

For the "Screenshot Selection" in the lasso menu:

- In a single open document, use "Screenshot Selection" to instantly capture the selected region as an image. You can drag this image to the "Clipboard" (if supported by your device).
- When you have two documents open in split-screen, use "Screenshot Selection" in one document and directly drag the captured image to the other, creating a "bidirectional link" between the two documents. Clicking the "bidirectional link" allows for seamless navigation between the linked documents.

Laser Pen

The laser pen is versatile for presentations and explanations. It's handy for quick calculations and vocabulary memorization. Writing with it disappears after a set time, leaving no trace or need for erasing.

Tips:

Customize the laser pen with your preferred color and adjust brush thickness. Set the writing disappearance duration in the laser pen options.

09 Auto Shape

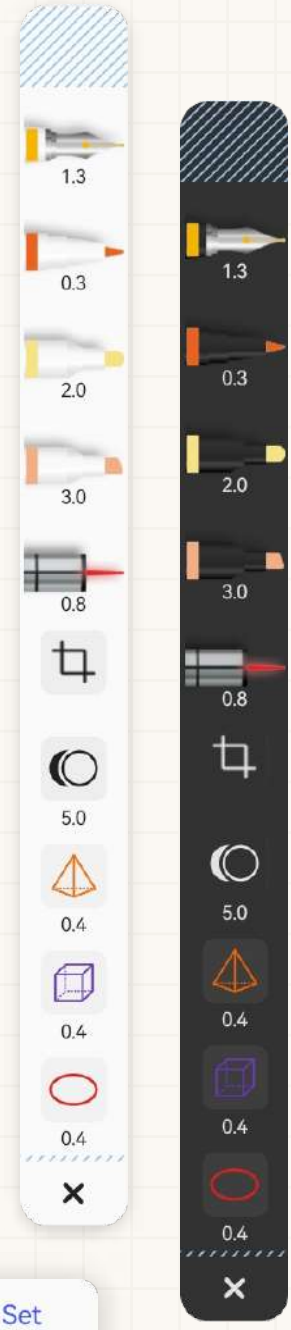

Simply draw your desired shape using any of our pen tools. After drawing, pause for 1 second without lifting the stylus and the app will automatically perfect your lines into regular shapes.Auto Shape supports a variety of shapes including straight lines, parabolas, circles, ellipses, triangles, rectangles, pentagons, and stars.

10 Tool Collection

How to display the pen box favorites when it has been collected: Click on the upper left corner of the pen box.

Save your favorite tools and brush settings in the Tool Collection of the pen case. It's compact and easy to access, allowing for quick tool switching. Tap the ★ icon in the top right corner of the pen options menu to add the current pen's settings to the Tool Collection.

Tips:

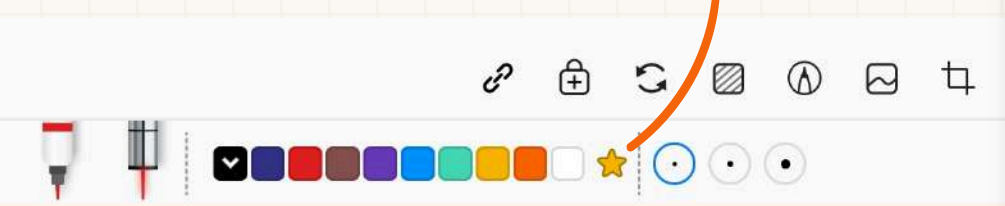

- Long-press any tool to enter editing mode, where you can rearrange or remove items.
- Include commonly used shapes, erasers, and lasso tools in the Tool Collection.
- Position the Tool Collection horizontally or vertically on the screen for your convenience.

11 Color Palette

Customize the ten default colors in the pen case using the Color Palette. Double-click on a color block to modify its color values or pick a new color on the screen.

Tips:

Create custom color palettes by adjusting the default colors and tapping the ★ icon. Long-press a custom palette to delete or rename it.

12 Text Box

Click the text box icon T on the far left side of the pen box to enter the text box editing mode to insert a text box for use. We have preset a variety of Chinese and English fonts, and you can also import your own favorite personalized fonts for use. You can also set various font styles: bold, italic, underline, etc.

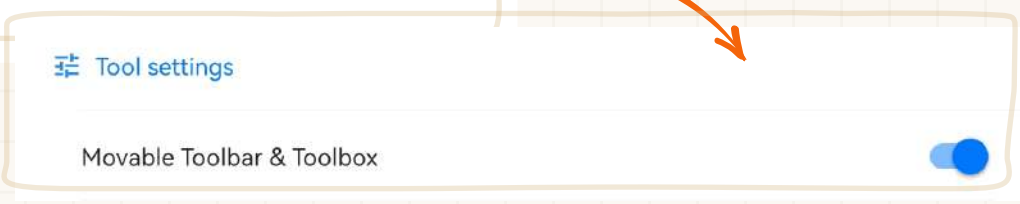

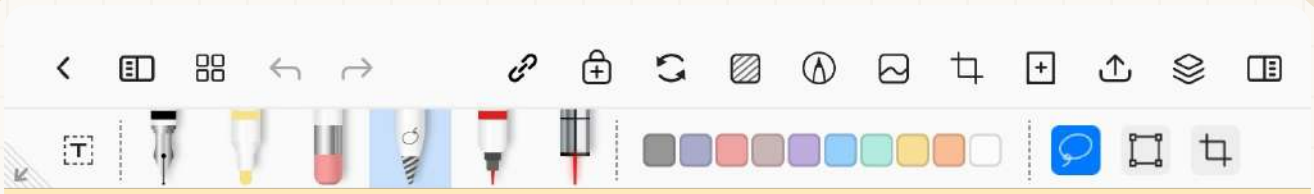

13 Toolbar Options

Notein provides two toolbar options: Immersive Toolbar and Traditional Toolbar. The Immersive Toolbar, along with the expandable/collapsible pen case, maximizes the content display area. On the other hand, the Traditional Toolbar with the fixed pen case is located at the top of the screen for more efficient tool switching, but it sacrifices some content display space.

Tips:

Easily switch between the Immersive and Traditional Toolbar by enabling or disabling the "Immersive Toolbar" option in settings.

6 M. GRADY AND T. MAGISTRALE

gothic infiltrate genres that appear at first glance to exist outside the realm of horror art in moments when boundaries are blurred that distinguish

14 Text Selection

Activate "Text Selection" in settings to easily select text within your document. Just press and hold your finger or stylus on the text to see a light blue block that lets you adjust the selection. From there, you can perform various actions like copying, marking (highlighting, underlining, strikethrough), adding to the outline, and even translating the text.

Tips:

- Long-pressing selected text for 1 second will create a duplicate, which can be directly dragged to the "Clipboard" or moved across screens:
1. In-app split-screen: Drag text to another document within the app.
2. System split-screen multitasking: Drag text to another document within the app or to another app.
Note that only standard formatted PDF, PPT, or Word documents support text selection. Scanned or image-based documents do not support text selection.

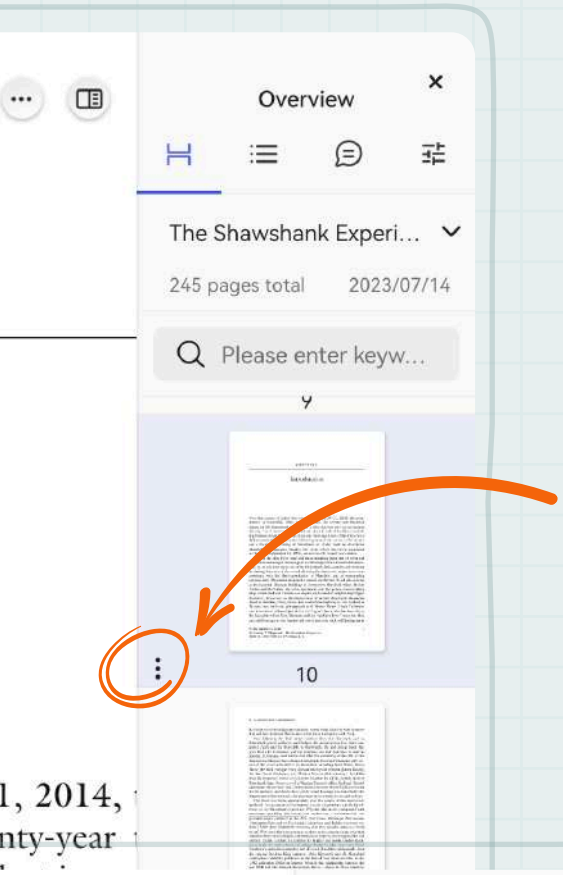

15 Discover the Left Sidebar

Swipe right from the left edge or tap the top left corner to see recent documents. Drag documents for easy in-app split-screen use. Use the search box to find what you need quickly.

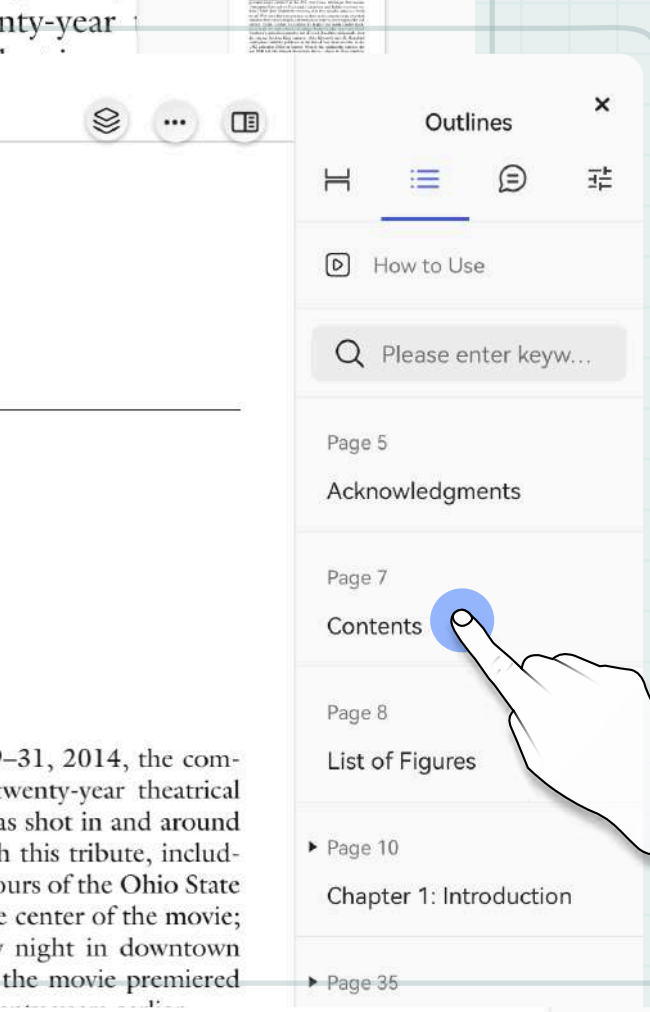

16 Explore the Right Sidebar

Open the to access page overview, outline, annotations, and settings for your document. Search for specific content easily.

Page Editing Made Easy

In "Page Overview," click a thumbnail to jump to that page. Drag to reorder pages. Use the icon in the bottom left to delete, copy, export, outline, or annotate a page.

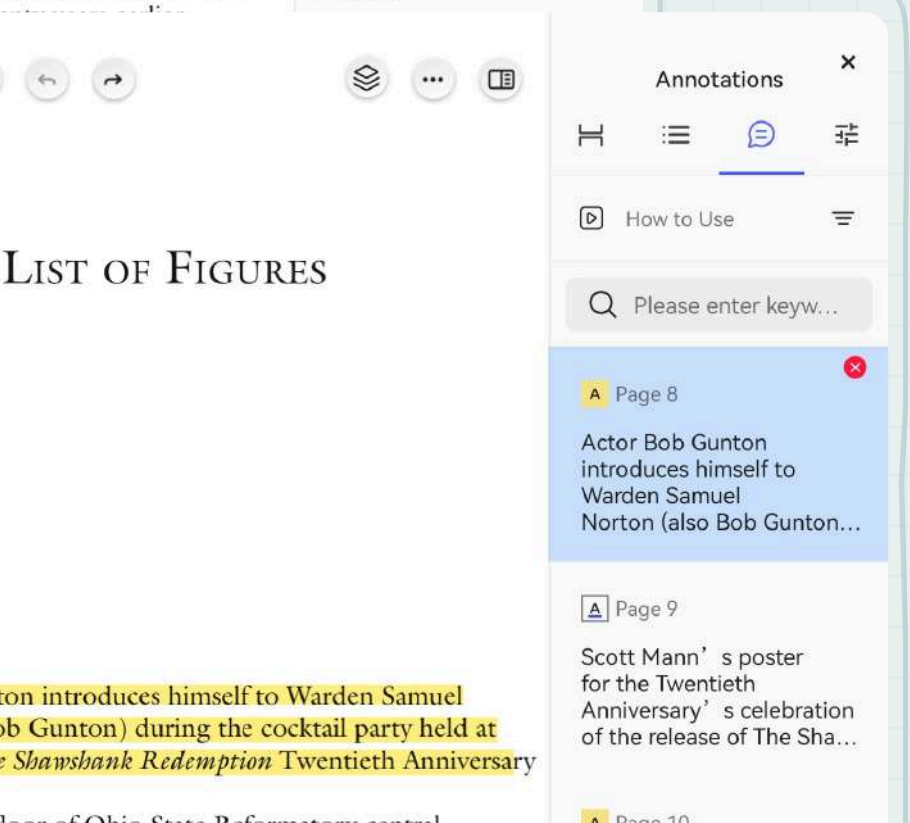

Effortless Outline Creation

If your document has an outline, it's automatically imported into the "Outline" section. For documents without an outline, use "Text Selection" to manually add text. Click the icon in the bottom left of a page to create a handwritten outline in "Page Overview."

Nested Outlines Simplified: Drag one outline onto another to create sub-levels effortlessly. Up to ten levels of subheadings are supported.

Organize Outlines Your Way: Drag and drop outlines to rearrange their order in the outline section. Easily reorganize outlines to suit your preferences.

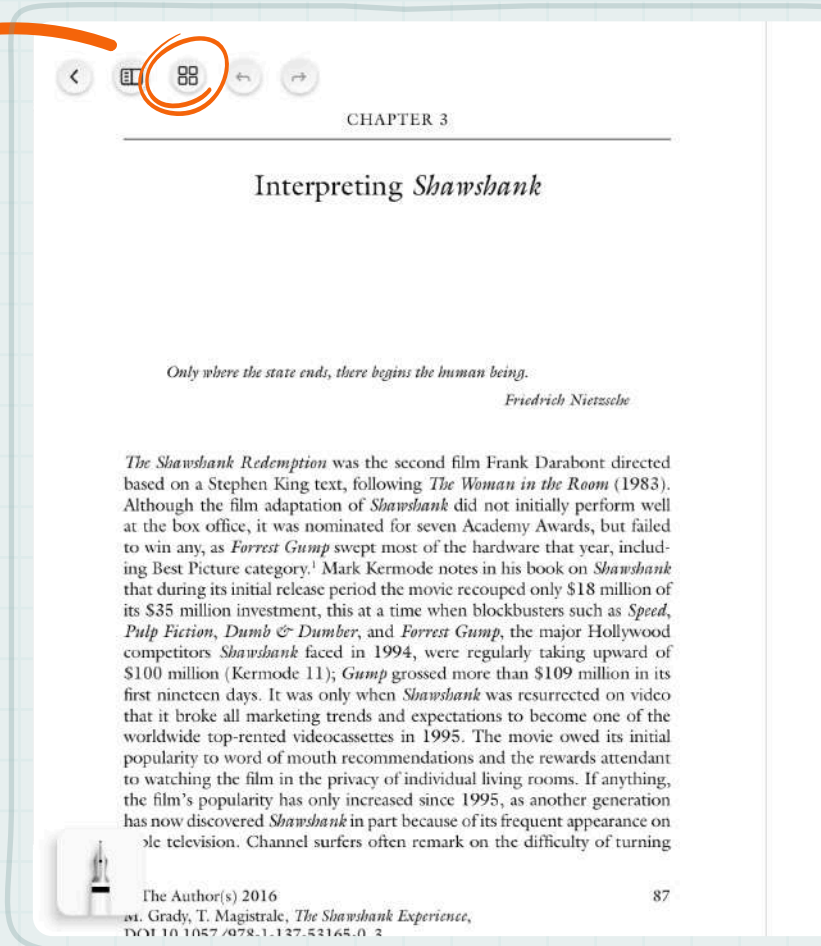

Effortless Annotations

Enable "Text Selection" to automatically record highlights, underlines, and strikethroughs in the "Annotations" section. Easily manage and revisit important points in your document.

Personalized Annotations: Click the icon in the bottom left corner of a page in "Page Overview" to add custom annotations or extra notes to specific pages.

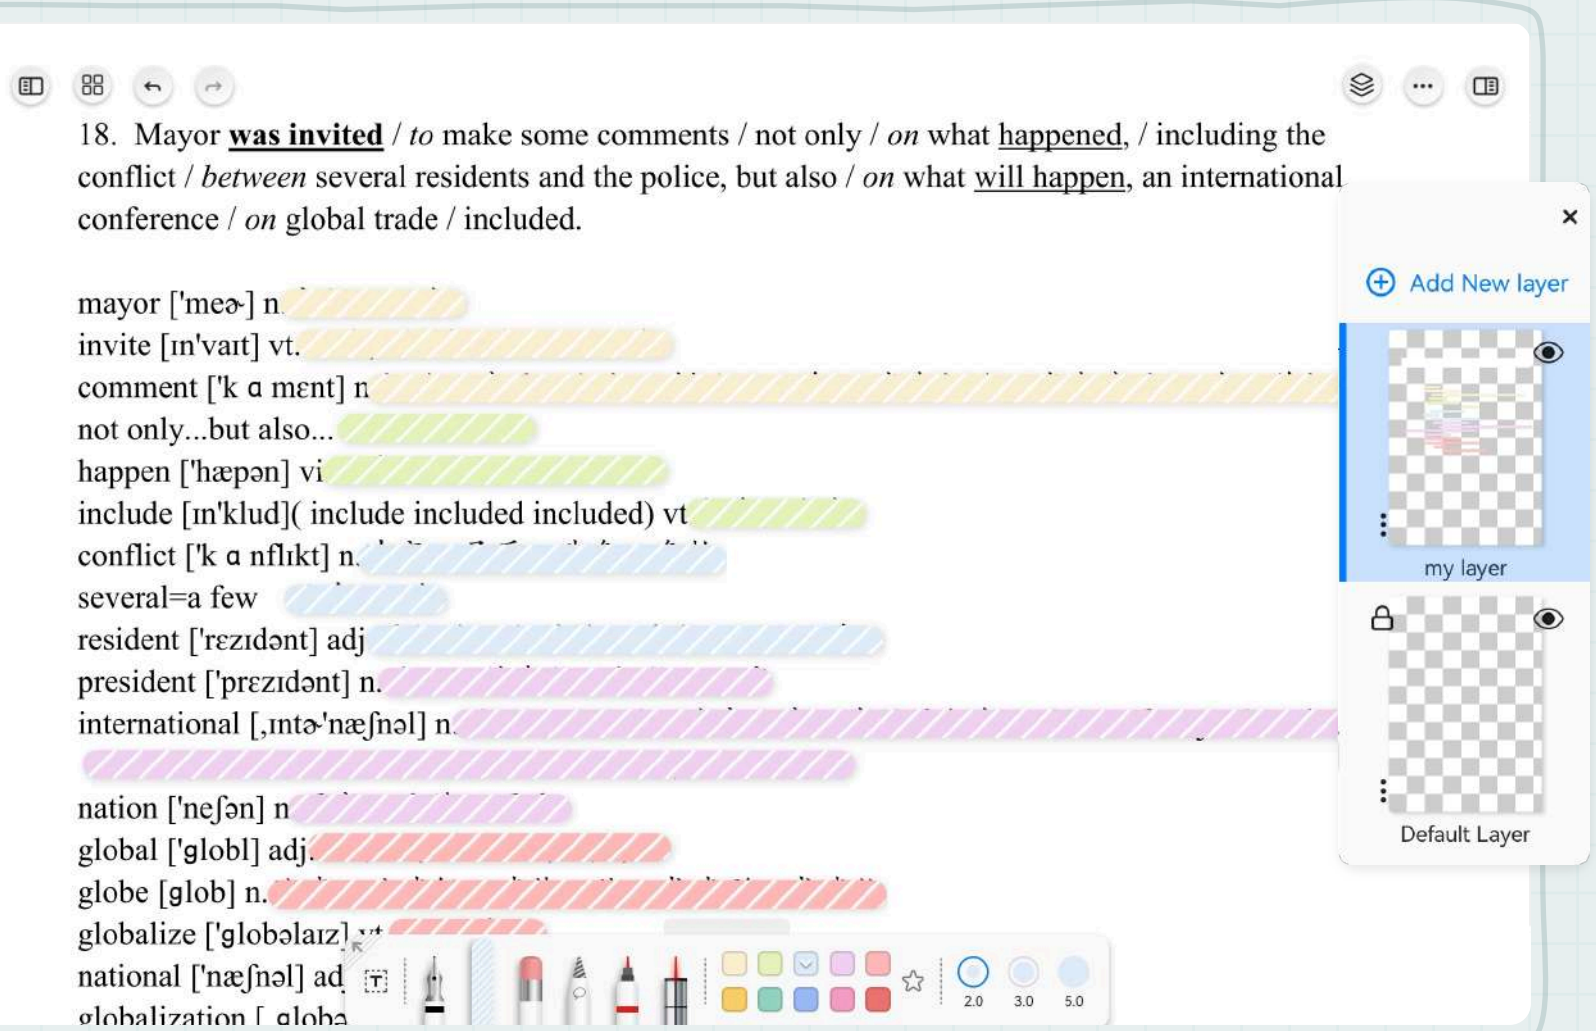

17 Thumbnail View

Clicking the  opens the Thumbnail View, providing a visual overview of all document pages. Easily select and perform editing operations like copying, deleting, or moving pages.

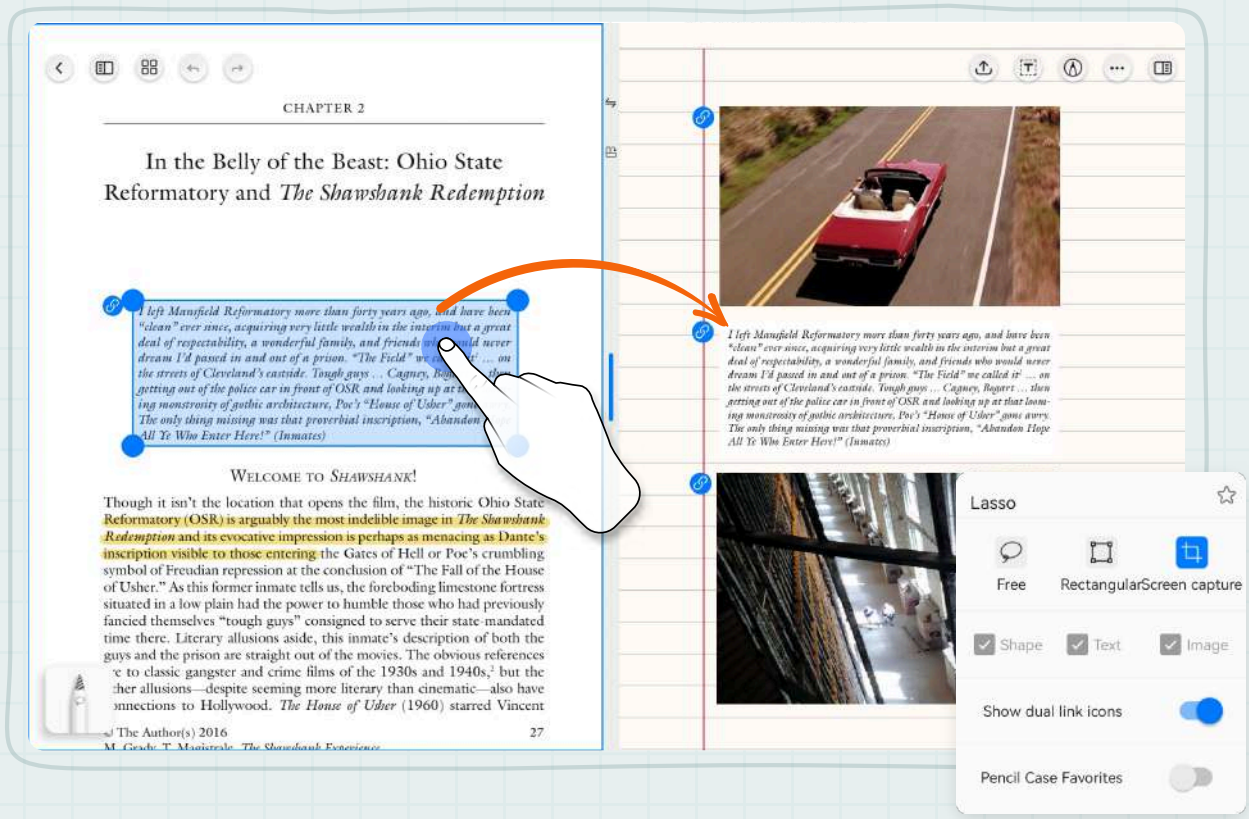

18 Layers

Click the "Layer" icon  in the toolbar to see the layers of the current document. All elements written/drawn by the pen tool, as well as inserted pictures or text boxes, will appear in the layers. You can show/hide layers, merge layers, move layer positions, rename layer names, etc.

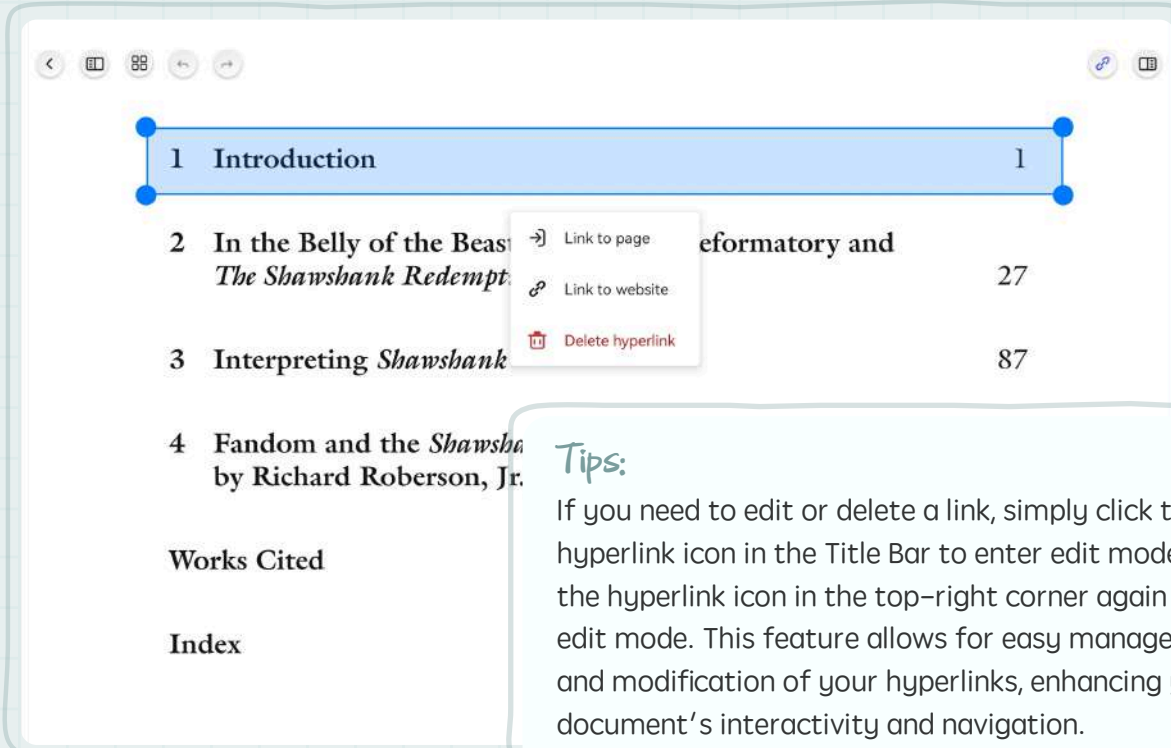

19 Creating Bidirectional Links

In split-screen mode, use the lasso tool's "Screenshot Selection" feature to select content and drag the screenshot to the other side. This creates bidirectional links, allowing seamless navigation between multiple documents for easy access to referenced content and an efficient note-taking experience.

20 Create Hyperlink

To create a hyperlink in Notein, click on the hyperlink icon in the Title Bar. Then, select the area where you want to create the link and choose to link to a page or a web address to complete the creation process. You can also create hyperlinks by selecting text. Once a hyperlink is created, an icon will appear on the page. If you prefer not to display this icon, you can turn off "Show Hyperlink Icon" in the settings, which won't affect the link's functionality.

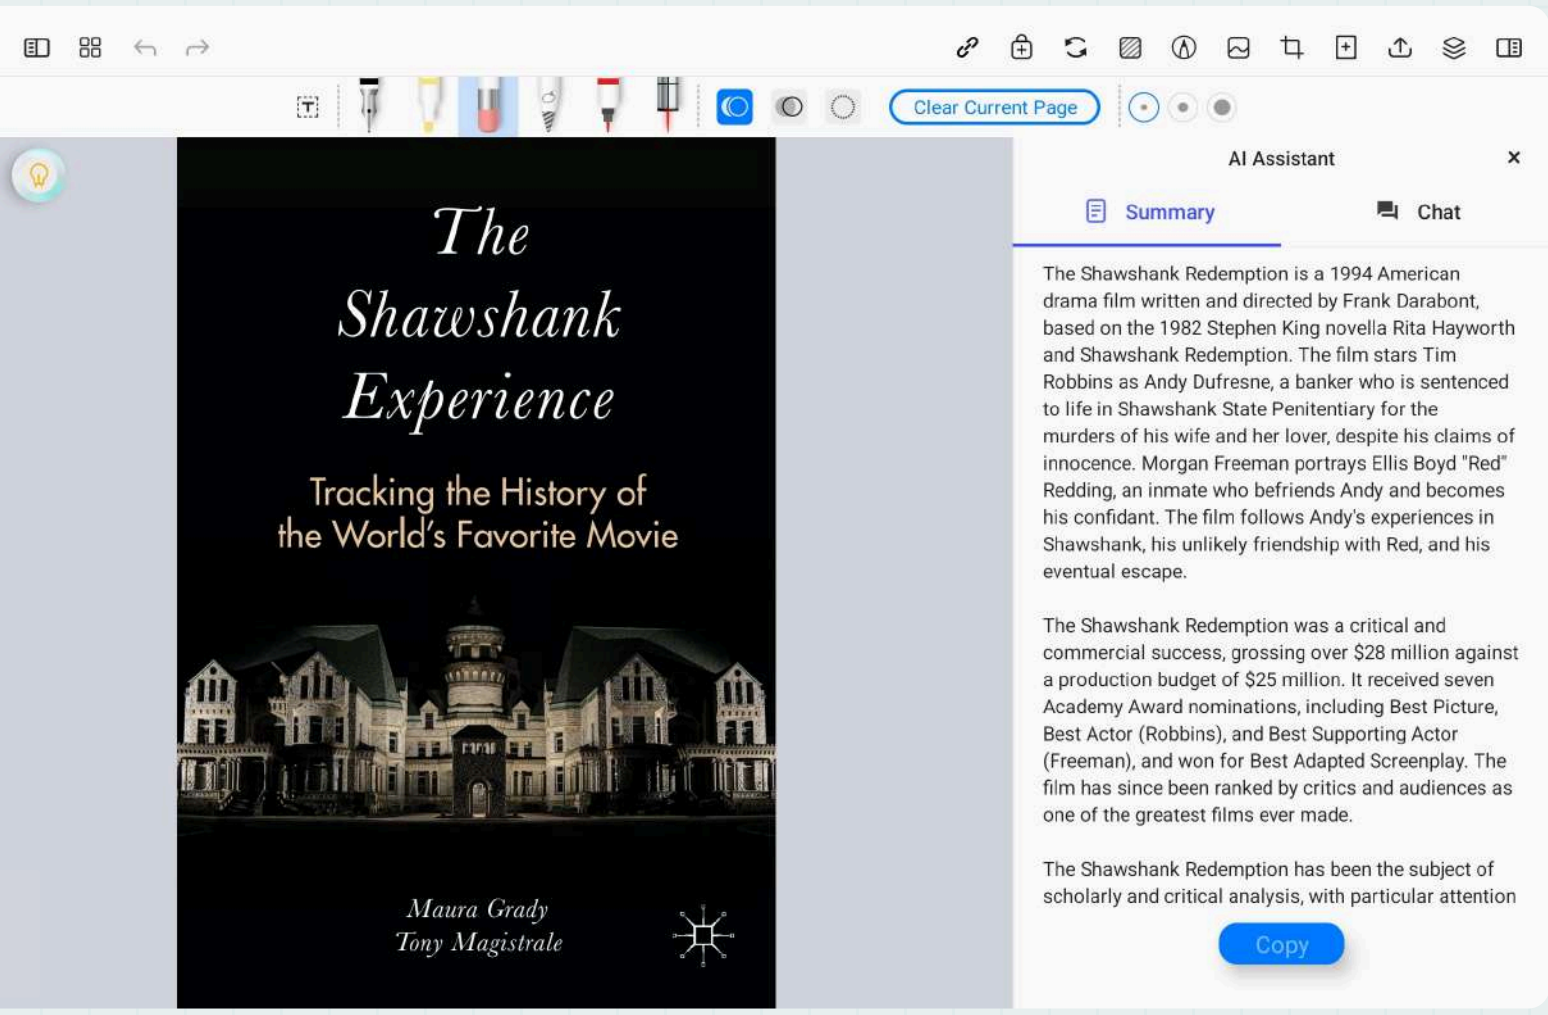

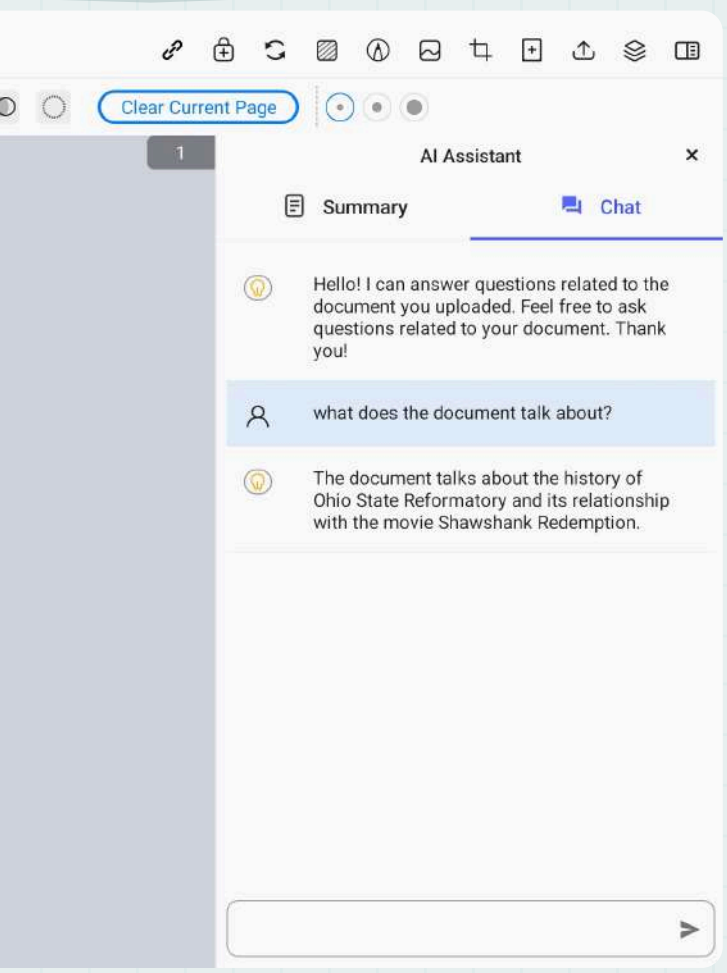

Tips:

If you need to edit or delete a link, simply click the hyperlink icon in the Title Bar to enter edit mode. Click the hyperlink icon in the top-right corner again to exit edit mode. This feature allows for easy management and modification of your hyperlinks, enhancing your document's interactivity and navigation.

21 AI Assistant

You can turn on the AI assistant switch in the settings. After turning it on, a light bulb icon will appear in the upper left corner. Clicking this icon will expand the sidebar of the AI assistant. The first item is the summary function. This function will upload document information to the AI reference automatically. Generate a summary of the article.

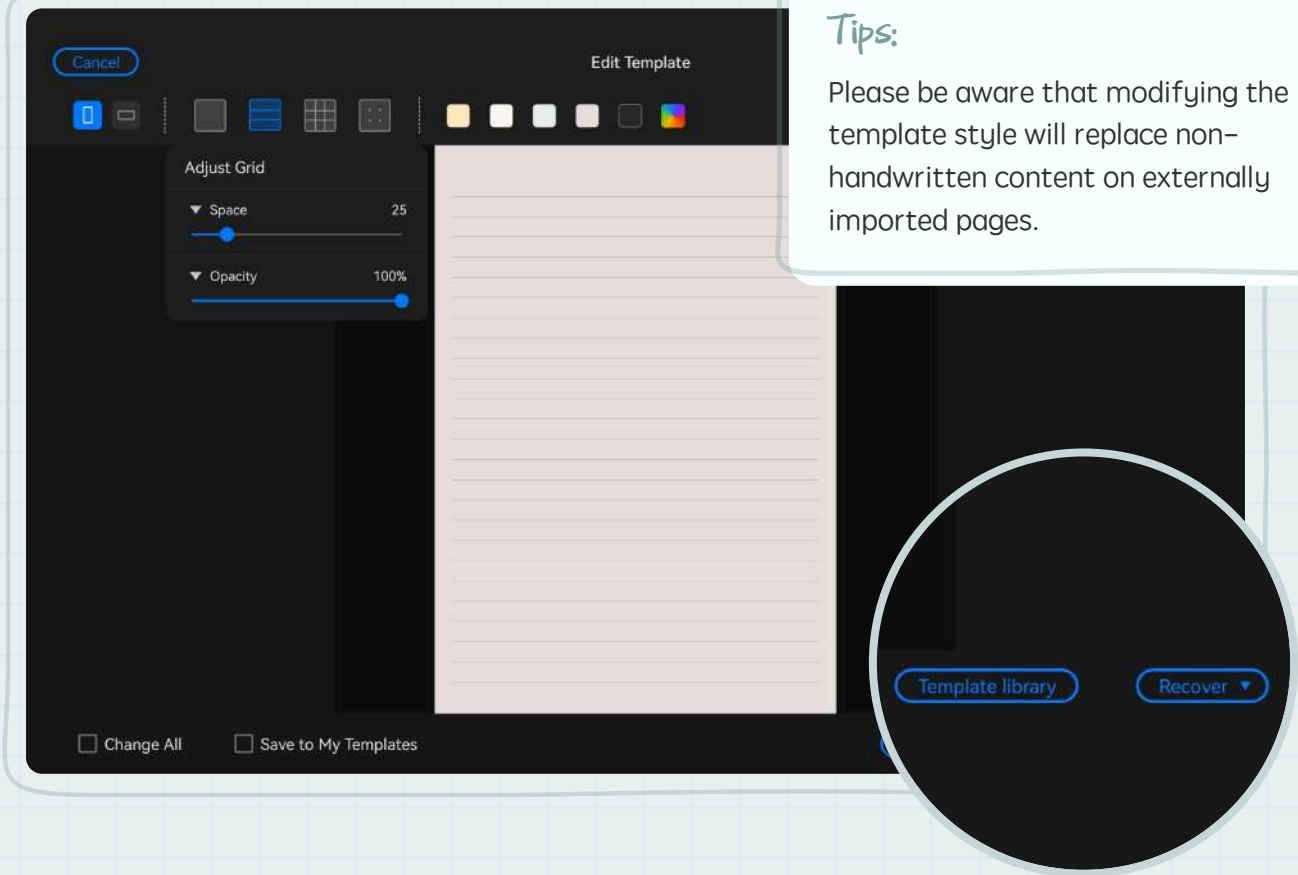

The second function is the conversation function. You can talk to the AI assistant to get the information you need to know, as long as it is about the content of this document.

Tips:

Currently, the AI assistant function only supports responses in English, and the document type only supports PDF format.

22 Modifying Templates

Click the "Modify Template" icon to customize the current page's style. You can adjust paper orientation, size, grid style, and color. Explore more templates in the "Browse Template Library" option. To apply changes across the entire document, select "Apply Globally." Use the "Restore" option to revert to the original page style.

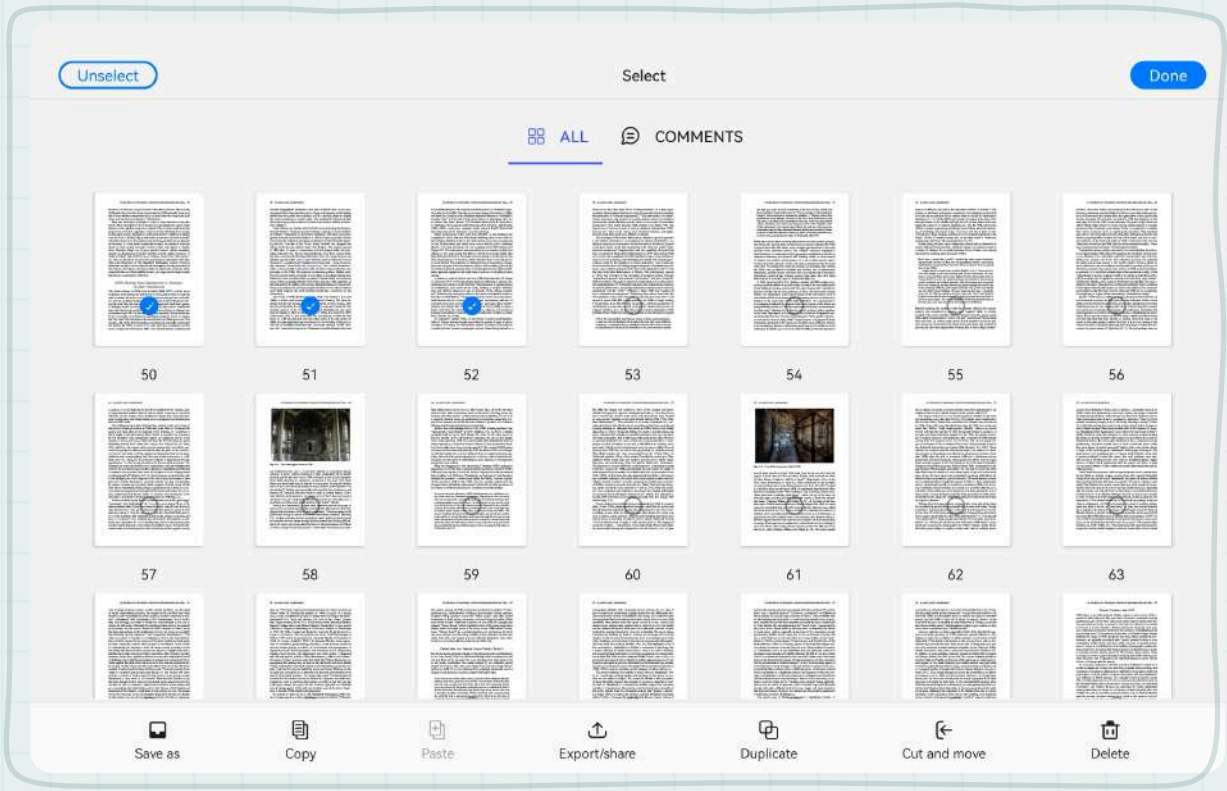

Tips:

Please be aware that modifying the template style will replace non-handwritten content on externally imported pages.

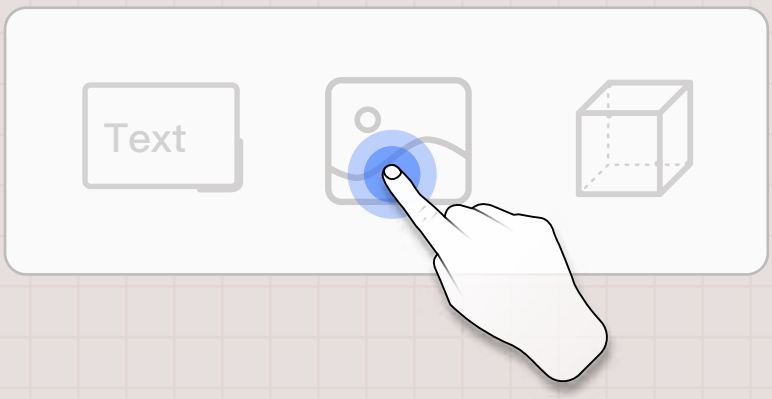

23 Splitting and Merging Documents

In the Thumbnail View, select and copy individual pages or all pages. Choose a target document and position to paste the selected pages, enabling easy document splitting or merging.

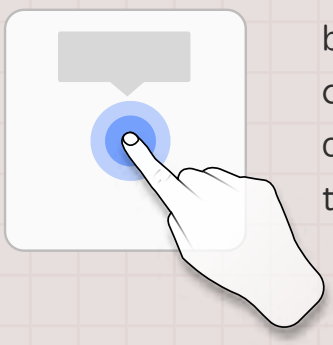

Part 4. Gesture Instructions

One-Finger Long Press:

a. Press and hold with one finger on an image, text box, or shape to start editing.

b. After copying content, press and hold on the screen to access the "Paste" option.

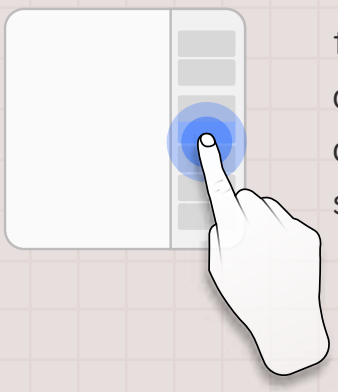

c. Drag with one finger while pressing and holding to move documents or change page order.

d. Drag a document onto another while pressing and holding to quickly create a folder.

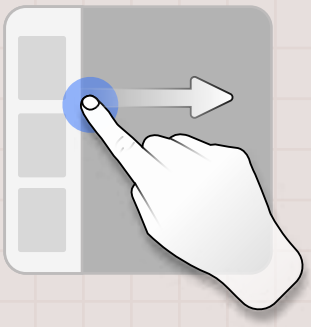

e. Press and hold, then drag to activate the "In-App Split-Screen" mode.

f. Drag an outline onto another while pressing and holding to create sub-level outlines.

g. Press and hold (or use a stylus) on text and drag to select specific text.

Single-Finger Right Swipe:

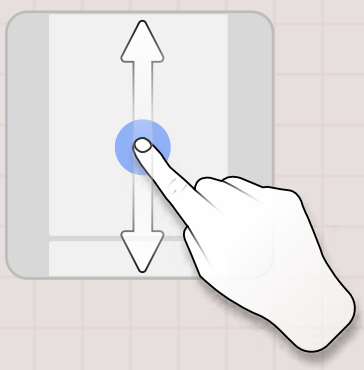

Open the left sidebar with a single-finger right swipe.

Single-Finger Double Tap:

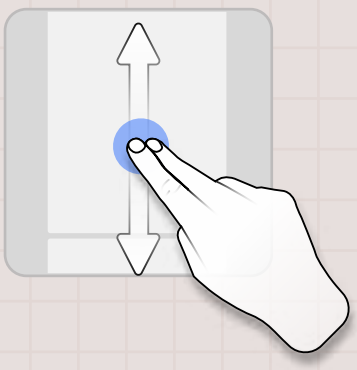

Double tap the screen with one finger to automatically fit the page to the screen size.

Tips: You can enable or disable this gesture in the settings.

Single-Finger Page Scroll:

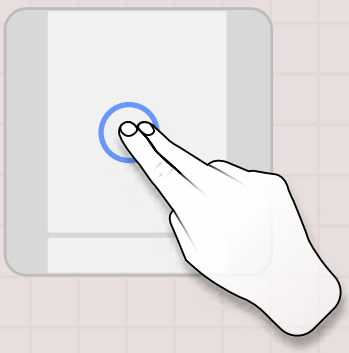

In stylus mode , use one finger to smoothly scroll up or down the page.

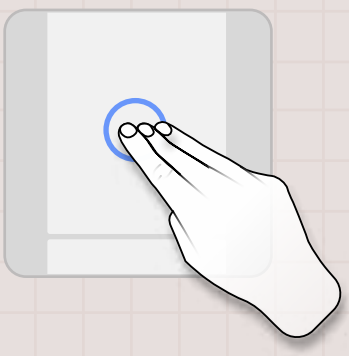

Two-Finger Page Scroll:

In finger writing mode , use two fingers to scroll up or down the page for page turning.

Tips: You can enable this gesture in the settings to also apply it to stylus writing mode.

Two-Finger Single Tap (Undo)

Three-Finger Single Tap (Redo)

Tips: You can enable or disable these gestures in the settings.
